Environment

Fuel poverty

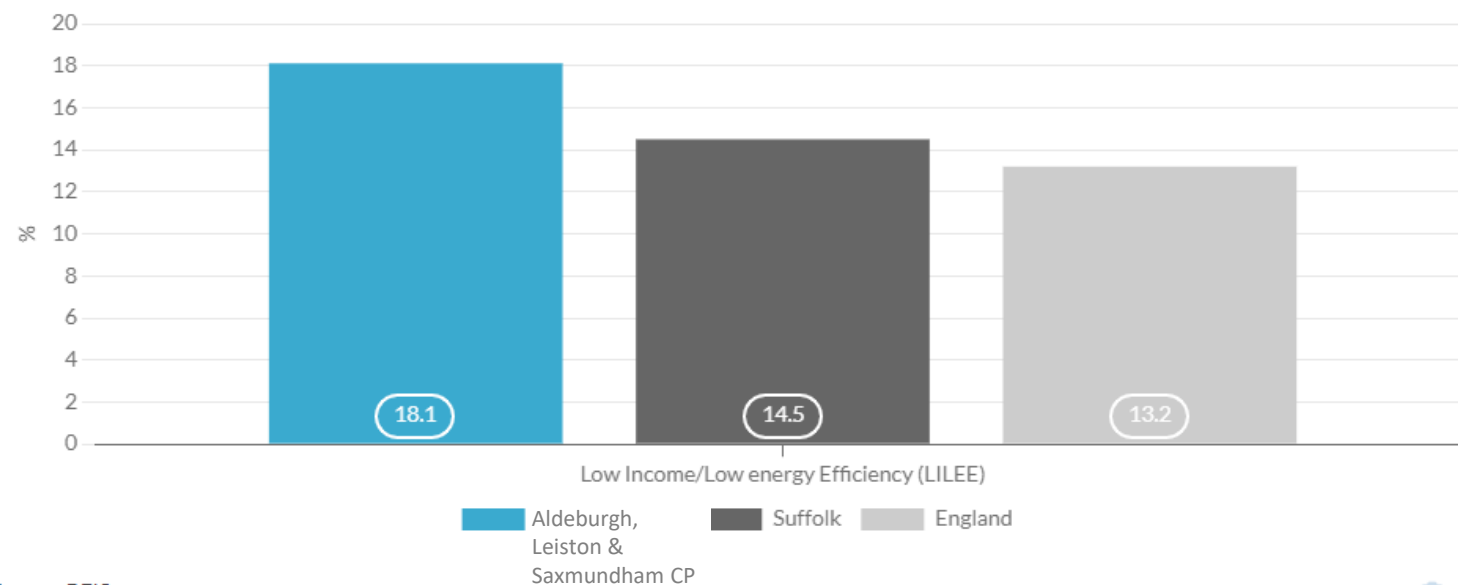

A new definition of fuel poverty was introduced in 2021. This is the 'Low Income Low Energy Efficiency' (LILEE) definition of fuel poverty stating that a household is fuel poor if:

- They are living in a property with an energy efficiency rating of band D, E, F or G
- Their disposable income (income after housing costs and energy needs) is below the poverty line.

Fuel poverty is affected by a household's income, their fuel costs, and their energy consumption which can be affected, in return, by the energy-efficiency of the household's dwelling.

Poor energy efficiency dwellings will require more fuel for heating purposes, and, as a consequence, more CO₂ emissions will be produced. Energy efficiency improvements are key as they reduce energy and fuel consumption and, as a result, fuel poverty.

Percentage of households in fuel poverty - Low Income/Low energy Efficiency (LILEE) (2020)
