Sites with results in bold are above the annual mean Air Quality Objective of 40 µg/m<sup>3</sup>

# Data has been annualised (where applicable), then bias adjusted in accordance with the Defra Technical Guidance LAQM.TG(16). Concentrations are those at the location of monitoring and not those following any fall-off with distance adjustment.

Please note that during 2020 the COVID-19 lockdowns had an impact to reduce traffic flows across the country. This will, in turn, have led to a reduction in vehicle emissions of NO<sub>2</sub> and therefore recorded NO<sub>2</sub> concentrations within the district. Please use caution when interpreting the data.
