Source: ONS - 2011 Census (KS209EW)

The voluntary question on religion in the 2011 Census was intended to capture people's religious affiliation and identification at the time of the Census irrespective of whether they practised or believed in that religion or how important it was in their lives. If a person had no religion then the first of a series of tick boxes could be selected. Care should be taken when using these data not to infer, or allow the inference by others, that the practice of a religion or specific religious activities that are expected of believers has been measured. Unlike other census questions where missing answers are imputed, this question was voluntary, and where no answer was provided the response is categorised as 'not stated'.

Due to an error in the processing of census data, the number of usual residents in the 'Religion not stated' category has been overestimated by a total of 62,000 for three local authorities: Camden, Islington and Tower Hamlets. More information from <http://www.ons.gov.uk/ons/guide-method/census/2011/census-data/census-products--issues-and-corrections/index.html> (opens in new window)

Definitions

General information (applicable to all tables)

Statistical Disclosure Control

In order to protect against disclosure of personal information from the 2011 Census, there has been swapping of records in the Census database between different geographic areas, and so some counts will be affected. In the main, the greatest effects will be at the lowest geographies, since the record swapping is targeted towards those households with unusual characteristics in small areas. More details on the ONS Census disclosure control strategy may be found on the Statistical Disclosure Control (opens in new window) page on the ONS web site.

Usual resident population

Sex

Sex is the classification of a person as either male or female.

Household

A household is defined as:

- one person living alone, or
- a group of people (not necessarily related) living at the same address who share cooking facilities and share a living room or sitting room or dining area.

This includes:

- sheltered accommodation units in an establishment where 50 per cent or more have their own kitchens (irrespective of whether there are other communal facilities), and
- all people living in caravans on any type of site that is their usual residence. This will include anyone who has no other usual residence elsewhere in the UK.

A household must contain at least one person whose place of usual residence is at the address. A group of short-term residents living together is not classified as a household, and neither is a group of people at an address where only visitors are staying.

Communal establishments

A communal establishment is an establishment providing managed residential accommodation. 'Managed' in this context means full-time or part-time supervision of the accommodation. Types of communal establishment include:

- Sheltered accommodation units where fewer than 50 per cent of the units in the establishment have their own cooking facilities, or similar accommodation where residents have their own rooms, but the main meal is provided. If half or more possess their own facilities for cooking (regardless of use) all units in the whole establishment are treated as separate households.
- Small hotels, guest houses, bed & breakfasts and inns and pubs with residential accommodation with room for 10 or more guests (excluding the owner/manager and his/her family).
- All accommodation provided solely for students (during term-time). This includes university-owned cluster flats, houses and apartments located within student villages, and similar

accommodation owned by a private company and provided solely for students (University owned student houses that were difficult to identify and not clearly located with other student residences are treated as households, and houses rented to students by private landlords are also treated as households). Accommodation available only to students may include a small number of care-taking or maintenance staff, or academic staff.

- Accommodation available only to nurses. This includes cluster flats and similar accommodation, provided solely for nurses. Nurses' accommodation on a hospital site that does not also contain patients is treated as a separate communal establishment from the hospital (and not categorised as a hospital), so that nurses are treated as 'residents' and not 'resident staff' or 'patients'. This ensures consistency with similar nurses' accommodation not on a hospital site.

Schoolchildren and full-time students

Schoolchildren and students in full-time education studying away from their family home are treated as usually resident at their term-time address. Basic demographic information only (name, sex, age, marital status and relationship) is collected at their non term-time address (their 'home' or 'vacation' address).

The information on families, household size and household composition for their non term-time address does not include them.

Area

For area measurements, census statistics use Standard Area Measurements (SAM), created by ONS Geography for key geographies in the UK using standard methodologies. SAMs are land measurement figures defined by topographic boundaries (coastline and inland water) as at the end of 2011.

Area measurements are in hectares - the metric unit of area defined as 10,000 square metres or approximately 2.47 acres - there are 100 hectares in 1 km².

Each area measurement used in census results is calculated by aggregating the SAM (measured to two decimal places) for each output area that has been best-fitted to each higher area.

Age structure

Age

Age is derived from the date of birth question and is a person's age at their last birthday, at 27 March 2011. Dates of birth that imply an age over 115 are treated as invalid and the person's age is imputed. Infants less than one year old are classified as 0 years of age.

Marital and civil partnership status

Marital and civil partnership status

Marital and civil partnership status classifies an individual according to their legal marital or registered same-sex civil partnership status as at census day, 27 March 2011.

This topic is the equivalent of the 2001 Census topic 'Marital status', but has undergone significant revision to take account of the Civil Partnership Act which came into force on 5 December 2005.

Marital and civil partnership states include:

- married/in a registered same-sex civil partnership,
- separated (but still legally married/in a registered same-sex civil partnership),
- divorced/formerly in a registered same-sex civil partnership, or
- widowed/surviving same-sex civil partner.

Although the term 'single' is widely used to cover people in a number of states such as divorced or separated it is not a legally recognised status and was not an option on the census questionnaire. In census results the term 'single' is used to refer only to someone who has never been married or in a registered same-sex civil partnership, which were options on the census questionnaire.

Living arrangements

Living arrangements

The living arrangements classification combines responses to the question on marital and civil partnership status with information about whether or not a person is living in a couple. This topic is only applicable to people in households. Living arrangements differs from marital and civil partnership status because cohabiting takes priority over other categories. For example, if a person is divorced and cohabiting, then in results for living arrangements they are classified as cohabiting.

Ethnic group

Ethnic group

Ethnic group classifies people according to their own perceived ethnic group and cultural background.

Country of birth

Country of birth

Country of birth is the country in which a person was born. The country of birth question included six tick box responses - one for each of the four parts of the UK, one for the Republic of Ireland, and one for 'Elsewhere'. Where a person ticked 'Elsewhere', they were asked to write in the current name of the country in which they were born. Responses are assigned codes based on the National Statistics Country Classification.

The grouping of countries within the classification is broadly regional, but takes into account the grouping of European Union (EU) countries. Countries in the EU are grouped into those that were EU members in March 2001, and those that became members (Accession countries) between April 2001 and March 2011 as part of the EU enlargement process.

Household language

Proficiency in English language

Proficiency in English language classifies people whose main language is not English (or not English or Welsh in Wales) according to their ability to speak English. A person is classified in one of the categories:

- can speak English very well,
- can speak English well,
- cannot speak English well, or
- cannot speak English.

Religion

The voluntary question on religion in the 2011 Census was intended to capture people's religious affiliation and identification at the time of the Census irrespective of whether they practised or believed in that religion or how important it was in their lives. If a person had no religion then the first of a series of tick boxes could be selected. Care should be taken when using these data not to infer, or allow the inference by others, that the practice of a religion or specific religious activities that are expected of believers has been measured. Unlike other census questions where missing answers are imputed, this question was voluntary, and where no answer was provided the response is categorised as 'not stated'.

Due to an error in the processing of census data, the number of usual residents in the 'Religion not stated' category has been overestimated by a total of 62,000 for three local authorities: Camden, Islington and Tower Hamlets. More information from the Census issues and corrections ([opens in new window](#)) page.

Health and provision of unpaid Care

Long-term health problem or disability

A long-term health problem or disability that limits a person's day-to-day activities, and has lasted, or is expected to last, at least 12 months. This includes problems that are related to old age. People were asked to assess whether their daily activities were limited a lot or a little by such a health problem, or whether their daily activities were not limited at all.

General Health

General health is a self-assessment of a person's general state of health. People were asked to assess whether their health was very good, good, fair, bad or very bad. This assessment is not based on a person's health over any specified period of time.

Provision of unpaid care

A person is a provider of unpaid care if they look after or give help or support to family members, friends, neighbours or others because of long-term physical or mental ill health or disability, or problems related to old age. This does not include any activities as part of paid employment. No distinction is made about whether any care that a person provides is within their own household or outside of the household, so no explicit link can be made about whether the care provided is for a person within the household who has poor general health or a long-term health problem or disability.

Dwellings, household spaces and accommodation type

Number of household spaces in shared dwellings

A household space is the accommodation used or available for use by an individual household. Household spaces are identified separately in census results as those with at least one usual resident, and those that do not have any usual residents.

A household space with no usual residents may still be used by short-term residents, visitors who were present on census night, or a combination of short-term residents and visitors.

Vacant household spaces, and household spaces that are used as second addresses, are also classified in census results as 'household spaces with no usual residents'.

A dwelling is shared if:

- the household spaces it contains have the accommodation type 'part of a converted or shared house',
- not all of the rooms (including kitchen, bathroom and toilet, if any) are behind a door that only that household can use, and
- there is at least one other such household space at the same address with which it can be combined to form the shared dwelling

Tenure

Tenure

Tenure provides information about whether a household rents or owns the accommodation that it occupies and, if rented, combines this with information about the type of landlord who owns or manages the accommodation.

Rooms, bedrooms and central heating

Central heating (variable)

A household's accommodation is classified as having central heating if it is present in some or all rooms (whether used or not). Central heating is classified by type, as shown in the classification table. Other central heating includes solar, liquefied petroleum gas (LPG) or other bottled gas.

This information is not available for household spaces with no usual residents.

Car or van availability

Cars or vans in household

This applies to the number of cars or vans that are owned, or available for use, by one or more members of a household. This includes company cars and vans that are available for private use. It does not include motorbikes or scooters, or any cars or vans belonging to visitors. The count of cars or vans in an area relates only to households. Cars or vans used by residents of communal establishments are not counted.

Households with 10 to 20 cars or vans are counted as having only 10. Responses indicating a number of cars or vans greater than 20 were treated as invalid and a value was imputed.

Household composition

Household composition

Household composition classifies households according to the relationships between the household members. Households consisting of one family and no other usual residents are classified according to the type of family (married, same-sex civil partnership or cohabiting couple family, or lone parent family) and the number of dependent children. Other households are classified by the number of people, the number of dependent children, or whether the household consists only of students or only of people aged 65 and over.

This definition is used in most results from the 2011 Census. In a small number of results an alternative classification is used that defines households by the age of the household members. It takes no account of the relationships between them. In results where this different definition is used it is clearly indicated.

Economic activity

Economic activity

Economic activity relates to whether or not a person who was working or looking for work in the week before census.

Rather than a simple indicator of whether or not someone was currently in employment, it provides a measure of whether or not a person was an active participant in the labour market.

A person's economic activity is derived from their 'Activity last week'. This is an indicator of their status or availability for employment - whether employed, actively looking for work, waiting to start a new job, available to start a new job, or their status if not employed or not seeking employment. Additional information included in the economic activity classification is also derived from information about the number of hours a person works and their type of employment - whether employed or self-employed.

The census concept of economic activity is compatible with the standard for economic status defined by the International Labour Organisation (ILO). It is one of a number of definitions used internationally to produce accurate and comparable statistics on employment, unemployment and economic status.

Economic activity - males

Economic activity

Economic activity relates to whether or not a person who was working or looking for work in the week before census.

Rather than a simple indicator of whether or not someone was currently in employment, it provides a measure of whether or not a person was an active participant in the labour market.

A person's economic activity is derived from their 'Activity last week'. This is an indicator of their status or availability for employment - whether employed, actively looking for work, waiting to start a new job, available to start a new job, or their status if not employed or not seeking employment. Additional information included in the economic activity classification is also derived from information about the number of hours a person works and their type of employment - whether employed or self-employed.

The census concept of economic activity is compatible with the standard for economic status defined by the International Labour Organisation (ILO). It is one of a number of definitions used internationally to produce accurate and comparable statistics on employment, unemployment and economic status.

Economic activity - females

Economic activity

Economic activity relates to whether or not a person who was working or looking for work in the week before census.

Rather than a simple indicator of whether or not someone was currently in employment, it provides a measure of whether or not a person was an active participant in the labour market.

A person's economic activity is derived from their 'Activity last week'. This is an indicator of their status or availability for employment - whether employed, actively looking for work, waiting to start a new job, available to start a new job, or their status if not employed or not seeking employment. Additional information included in the economic activity classification is also derived from information about the number of hours a person works and their type of employment - whether employed or self-employed.

The census concept of economic activity is compatible with the standard for economic status defined by the International Labour Organisation (ILO). It is one of a number of definitions used internationally to produce accurate and comparable statistics on employment, unemployment and economic status.

Hours worked

Hours worked

number of hours that a person in employment in the week before the census, worked in their main job. This includes paid and unpaid overtime.

Industry

Industry

The industry in which a person works relates to their main job, and is derived from information provided on the main activity of their employer or business. This is used to assign responses to an industry code based on the Standard Industrial Classification 2007.

Industry - males

Industry

The industry in which a person works relates to their main job, and is derived from information provided on the main activity of their employer or business. This is used to assign responses to an industry code based on the Standard Industrial Classification 2007.

Industry - females

Industry

The industry in which a person works relates to their main job, and is derived from information provided on the main activity of their employer or business. This is used to assign responses to an industry code based on the Standard Industrial Classification 2007.

Occupation

Occupation

A person's occupation relates to their main job and is derived from either their job title or details of the activities involved in their job. This is used to assign responses to an occupation code based on the Standard Occupational Classification 2010 (SOC2010).

Occupation - Major group

'Major group' refers to the categories at the highest level of the hierarchy of occupations.

Occupation - males

Occupation

A person's occupation relates to their main job and is derived from either their job title or details of the activities involved in their job. This is used to assign responses to an occupation code based on the Standard Occupational Classification 2010 (SOC2010).

Occupation - Major group

'Major group' refers to the categories at the highest level of the hierarchy of occupations.

Occupation - females

Occupation

A person's occupation relates to their main job and is derived from either their job title or details of the activities involved in their job. This is used to assign responses to an occupation code based on the Standard Occupational Classification 2010 (SOC2010).

Occupation - Major group

'Major group' refers to the categories at the highest level of the hierarchy of occupations.

NS-SeC

NS-SeC

The National Statistics Socio-economic Classification (NS-SEC) provides an indication of socioeconomic position based on occupation. It is an Office for National Statistics standard classification. To assign a person to an NS-SEC category their occupation title is combined with information about their employment status, whether they are employed or self-employed, and whether or not they supervise other employees. Full-time students are recorded in the 'full-time students' category regardless of whether they are economically active or not.

The rebased version of NS-SEC used in census results uses occupation coded to SOC2010. More information about NS-SEC:

<http://ons.gov.uk/ons/guide-method/classifications/current-standard-classifications/soc2010/soc2010-volume-3-ns-sec--rebased-on-soc2010--user-manual/index.html> (opens in new window)

In 2011 Census results, because the census did not ask a question about the number of employees at a person's workplace, the reduced method of deriving NS-SEC (which does not require this information) is used.

NS-SeC - males

NS-SeC

The National Statistics Socio-economic Classification (NS-SEC) provides an indication of socioeconomic position based on occupation. It is an Office for National Statistics standard classification. Full-time students are recorded in the 'full-time students' category regardless of whether they are economically active or not.

The rebased version of NS-SEC used in census results uses occupation coded to SOC2010. More information about NS-SEC:

<http://ons.gov.uk/ons/guide-method/classifications/current-standard-classifications/soc2010/soc2010-volume-3-ns-sec--rebased-on-soc2010--user-manual/index.html> (opens in new window)

In 2011 Census results, because the census did not ask a question about the number of employees at a person's workplace, the reduced method of deriving NS-SEC (which does not require this information) is used.
